

## **PRESS RELEASE: Clipper 60ft Set for Success**

The new 60ft vessel has lived up to the expectations of the designers and engineers with outstanding preliminary figures. The vessel gained a hull speed of 22knots with 26 passengers on board and holding tanks pressed up to capacity, 4315 litres of fuel and 1514 litres of water.

The new addition to the Clipper Motor Yacht range is powered by 2 x 540hp diesel Cummins engines. Some of the main features incorporated in the design of the Clipper 60' Motoryacht is a full walk around deck, 3 cabins plus crew quarters, large cock pit, fibre glass hard top, hand crafted teak interior, internal stairs to the fly bridge, The dynamics of the vessel start with the semi displacement hull with the ability to cruise in comfort and style at 11 to 20 knots, with a very economical fuel rate. The 60' Motoryacht brings long range voyage capabilities to the table but is able to make haste to find safe anchorage at 22knots.

Darren Berry, Managing Director of Clipper Motor Yachts Australia is excited and proud to put his name and reputation with not only the 60ft vessel but other models to be released in 08. "The vessels are of excellent quality and a competitive price for the market they sit in" Mr Berry stated.

Clipper Motor Yachts Australia is eagerly awaiting the second 60ft vessel to be delivered to Australia mid 08 where it will be viewed by the Australian marine public at both major boat shows on the east coast. This particular vessel will have 2 x 670hp diesel Cummins engines which will produce a speed in excess of 24 knots. The expected retail price for Clippers new flag ship will be 1.6 million.
